Work Is Basic

THE OTHER day the president of Princeton University in his baccalaureate address to the graduating class, declared that leisure no matter to what use it may be put, can never be a substitute for work.

"The assumption," said Dr. Dodds, "that a man can express his real self in leisure-time activities and be happy in them, contains a fundamental psychological error. It is demonstrating his worth as a worker, not by his prowess in recreation, that a man wins self-respect and the respect of others.

These are grave, sound words. Self-development, self-expression, poise, strength, enduring satisfactions, growth in character and stability and in worth to the community and to the world, can come only through honest work well done, whatever it may be or whatever its monetary compensation.

The human organism, the muscular system, the brain cells, the hands, the poencies locked up in the mind, the relation which man bears to nature which is one of co-operation, the individual's responsibility to the race, all indicate clearly that man is a worker, not a parasite.

Another in consoling the widow of the deceased, speaks of "Having often dandled the corpse on his knee."

An agent, in advertising a new baby bottle, says: "When the baby is done drinking it should be unscrewed and placed under a faucet. If the baby does not thrive on fresh milk it should be boiled."

A professor is greatly annoyed by his pupils communicating and says: "The minute I get up to speak, some fool begins to talk."

Again the rural preacher: "The apple of discord has been thrown into our midst; it is nipped in the bud it will burst into a conflagration that will deluge the world."

"It was wrong to write jokes about the French soldier's pants," said a sympathetic young lady. "They were red and flamboyant, but they covered as brave and tender hearts as ever beat."

"We wish to thank those who offered and assisted us in the death of our uncle, Samuel Arledge."

Purpose directs energy, and purpose makes energy.—C. H. Parkhurst.

HOW TO BEHAVE AT A FORMAL DINNER

First, upon entering the home of the host or hostess never shake hands with the butler. I did this once and by getting a slick jim jiri hold on me he threw me clear into the gutter.

Scrap Irony

By HARRY WILLIAMS

WE POPPED into the book store the other day to pick up Mr. Ernest Hemingway's recent novel, "To Have and Have Not." We'd heard a lot about it, one usually does hear a lot about Mr. Hemingway's books, and we thought perhaps we'd read it over the week-end.

It was after reading this powerful, moving example of Mr. Hemingway's picturesque prose that we came upon the book store's sales slip, which had been placed in the back of the book.

A friend of ours who is taking bacteriology comes to us with the reason why people put salt on potatoes. She says that potatoes contain a lot of potassium and that salt is necessary to maintain a balance.

Humor is often to be found in the mistakes of other people. They don't appear funny at the time of utterance, but when read in the newspaper or re-counted by someone else, they are hilarious.

Another in consoling the widow of the deceased, speaks of "Having often dandled the corpse on his knee."

An agent, in advertising a new baby bottle, says: "When the baby is done drinking it should be unscrewed and placed under a faucet. If the baby does not thrive on fresh milk it should be boiled."

A professor is greatly annoyed by his pupils communicating and says: "The minute I get up to speak, some fool begins to talk."

Again the rural preacher: "The apple of discord has been thrown into our midst; it is nipped in the bud it will burst into a conflagration that will deluge the world."

"It was wrong to write jokes about the French soldier's pants," said a sympathetic young lady. "They were red and flamboyant, but they covered as brave and tender hearts as ever beat."

"We wish to thank those who offered and assisted us in the death of our uncle, Samuel Arledge."

Purpose directs energy, and purpose makes energy.—C. H. Parkhurst.

HOW TO BEHAVE AT A FORMAL DINNER

First, upon entering the home of the host or hostess never shake hands with the butler. I did this once and by getting a slick jim jiri hold on me he threw me clear into the gutter.

Every year, more and more university athletes enter the professional ranks after graduation. Several years back it was hard to get a college man to go pro. Now they're all for it.

RAVELINGS

By JOHN ED PEARCE

WHILE viewing a presentation of a certain motion picture I happened to notice the response of the audience to the first scene. How the public likes to see things destroyed!

"San Francisco," one of the best-liked pictures of last year featured an earthquake, the equal of which had never been witnessed by the cinema calamity lovers.

Why is it that we are a race of gore-thirsters? Why do people still flock to see fires, and drop over scenes showing loss of life or property, perhaps man is still primitive in his cruelty.

The most educationally interesting and to invade the camp of the country is now raging around us. It is the current craze for student opinion.

Enchanter's Nightshade, A Novel, By Ann Bridge

It is always interesting and romantic to delve into the past, especially when that past is so little known, and is remembered vividly by so many.

Enchanter's Nightshade by the newly popular British authoress, Ann Bridge, takes its reader back to the Italy of 1905 and creates its friendly and intimate atmosphere with pleasing taste.

The setting of the story is the summer colony of noble families who owned property in the beautiful northern province of Gardone, which is bounded by the blue, rugged Alps.

THE BEAR FACTS Here's sound advice from Father Bear: Be sure to choose your food with care.

Bugle Call Awakes Students At Indiana's Police School

The Kernel's Special Service, "You can't get 'em up..."

As the strains of the first call fade into the crisp morning air, 30 cadets tumble from their beds, and another day of training is under way at the State Police camp located at Indiana University.

Day Ahead Scheduled Breakfast is served at 6:15 a. m. in the north dining room under the Commons for the cadets and in the Colored kitchen for the officers.

Intelligent, and lovable child—the daughter of the housework maid, she pleased the Marchesa Szuz— a suave, sophisticated "Enchantress" and her mistress. Her very complete botanical knowledge (botany was the hobby of the Marchesa's husband) made her indispensable to the shy and retiring Marchese Francesco.

Her pretty, sweet ways captivated the entire household at Otré— the Count of Carlo di Castellone, his son Gullio, his daughter Elena, and the chief factotum of the whole establishment, Fraulein Gelsecher—a competent Swiss.

In her turn, however, poor Almina was charmed by the masculine, intriguing cousin of Gullio and Elena. Roffredo di Castellone had a way with women to which the innocent English girl fell victim. Disaster followed.

BOOK REVIEWS Enchanter's Nightshade, A Novel, By Ann Bridge

It is always interesting and romantic to delve into the past, especially when that past is so little known, and is remembered vividly by so many.

Enchanter's Nightshade by the newly popular British authoress, Ann Bridge, takes its reader back to the Italy of 1905 and creates its friendly and intimate atmosphere with pleasing taste.

The setting of the story is the summer colony of noble families who owned property in the beautiful northern province of Gardone, which is bounded by the blue, rugged Alps.

the Chemistry building. Lunch is served at 11:15. At 12:30 p. m. they return to afternoon classes which last until 3:30. After 20 minutes of rest, the men drill until 5 o'clock.

Evening Classes Held The cadets then eat dinner at 6:15 p. m., but still their day is not over. Some evenings a class is held from 7:30 p. m. until 8:30. If not, then men are free until 9 o'clock when a warning call known as tattoo is blown. At 9:45 they are recalled to their quarters. Taps are sounded at 10, and another day is marked off the training calendar.

Army Regulations All the "army life" regulations are in force, and any insubordination constitutes reason for dismissal. These regulations include: intoxication or bringing liquor into camp, immoral conduct, disorderly conduct, violation of any law or regulation of the training camp.

The cadets are required to take class notes during lectures and must be prepared to submit their notebooks at any time for inspection. Notebooks are graded at the end of the school, and the grade is taken into consideration with the final written examination.

On Saturday afternoons and Sundays, the men may leave camp if they secure a pass from the commanding officer. No cadet is allowed to keep an automobile for his personal use during the school session, and if he brings one to camp, he must store it until July 23, when the school ends.

Cadets Wear Uniforms All men must wear the regulation uniform of black shoes, white duck trousers, black belt, white shirt, and black four-in-hand tie. No hat or cap is worn. Smoking is forbidden during classes and in formation.

Visitors are allowed to visit the camp only on Saturday afternoon and Sundays under the escort of the officer in charge. So as you see, the life of a state police cadet is not an easy one.

Usually two or three years of hard preliminary work are required to insure a "spontaneous" popular response to a new idea.

It is she who lifts the book from just interest to near-greatness. La Vessia Marchesa was nearly a century old, and still brilliant, keen, and observant. From her many years of watching people musing over their lives, she had attained an impatient detachment, which covered a sympathetic and understanding heart.

The beautiful descriptions, the apt characterizations, the startling situations, and the sweeping plot make this novel more than an interesting portrayal of manners and customs of Italy in 1905. Instead— though it is an over-worked phrase—Enchanter's Nightshade is a "human document" written with understanding, wit, and humor.

Mercer College Seeks To Eliminate Campus Politics

The Mercer's Special Service A petition to eliminate campus politics was read to the students of the Mercer College. In effect, the new amendment which was passed to the constitution stated that: each fraternity, etc., group should choose one delegate to every officer which they desired should be an officer; one delegate from each of these groups is elected, not as a candidate for any office, but who shall take the list of nominations from his group to the President of the Student Government.

Along with representatives from other groups, this delegate shall meet with the President of the Student Government and two members of the Faculty. Three candidates for each office shall be selected by this group to be voted on by the student body.

But if any delegate is suspected of political underhandness with another group, he shall be tried by the Student Council and if convicted, his group shall be required to pay a fine of \$50.00. This money will be used to pay each member of the Election Committee and the President and Secretary of the Student Government.

Sixty-Year-Old Retired Farmer Graduates From College

The Mercer's Special Service Montreal, Canada—After James Stevenson Cushing retired from farming two years ago at the age of 58 he found he had nothing to do. So he went to college.

As a result at 60 he was a member of the recent graduating class of the Sir George Williams college. The fact that he was much older than his classmates didn't keep Cushing from extra-curricular activities. During his first year at the school he was a contributor to the college newspaper.

Now he has about decided to venture further into the field of journalism.

Law Building, 50-Year Veteran, To House Hygiene Department

Soon to become the home of the hygiene department is the century old structure that is known to University students as the old Law Building. This will make the fourth department to be housed in the building which has housed during its 50 years of service to the University. At various times it has been used for the experiment station, chemistry department, and college of law.

Building Was Vacated

The old Law building was vacated at the end of the Christmas holidays when the College of Law was removed to the newly constructed Lafayette hall. Located on the main drive to the south of the Administration building, the structure is about 70 feet long and 50 feet wide. It is two stories high, plus a basement, and has a lower projection in front and an octagonal projection on the north side.

Soxell Was Director

The Experiment Station had been formed by the college in 1885 and had as its director Prof. M. A. Soxell, formerly superintendent of the United States experimental station at Ottawa, Kansas. Associated with Professor Soxell in the station work were Dr. Robert Peter, general chemistry; Prof. A. R. Crandall, botany, zoology and entomology; and Prof. A. E. Menke, agriculture and organic chemistry and veterinary science.

Gov. S. B. Buckner was chairman ex-officio of the board of trustees and James K. Patterson was president of the college when the building was constructed.

Members of the board of trustees at that time included Philmore Biggs, L. J. Bradford, Den Carlos Buel, J. D. Clardy, Hart Gibson, W. C. Ireland, W. B. Kinkaid, W. D. Nichols, A. A. Sours, W. W. Tice, and I. M. Utshank.

When the move was made the basement rooms on the left side of the Experiment Station building were used as storerooms for apparatus and chemical supplies. On the first floor were located the instructor's office, library, recitation room for more advanced students, balance room, and lab.

KAPPA DELEGATE

Miss Dorothy Clements (above) will leave Thursday for Hot Springs, Va., where she will represent the University chapter of Kappa Kappa Gamma at the sorority's thirty-third national convention. Others from Lexington who will attend the convention are Mrs. James Park and Mrs. Sarah Shelby Dunn, both University and Kappa alumnae. Before returning to the Bluegrass, Miss Clements will spend a week in New York City.

Hurt To Represent UKy Delta Zetas

Florine Hurt, Albany, will represent the University chapter of Delta Zeta, national social sorority, at the national convention to be held July 5-10 in Pasadena, California. Miss Hurt is president of the local chapter.

Other University Delta Zetas who will attend the convention are Mary Evelyn Cracraft, Mayfield; Hazel Harmon, Gravel Switch; Virginia Murrell, Somerset; Virginia Roberson, Elizaville; Gertrude Collins, Mayfield; and Mary Neal Walden, Ledlow.

Delegates from all Delta Zeta chapters east of the Mississippi river will meet in Chicago on July 5 where they will board a special train for Pasadena.

Places of interest will be visited by the delegates both to and from the convention.

A gala and intensive program has been planned for the convention. It includes a parade with each chapter entering a float of roses.

Scribe Discusses Proposal For Annual Baseball Meet

Probability of a high school baseball tournament being added to the University sports calendar was discussed by Laurence K. Shropshire, sports editor of the Lexington Leader, recently in his "Down In Front" column.

Pointing out that revival of baseball as a University sport had given impetus in the state to the game, Shropshire said that while the tournament was still in the "talk stage" there was apparently no good reason why the event would not be conducted by the University.

The portion of Shropshire's column concerning the proposed tournament follows: "The physical plant of the University of Kentucky athletic department, including Alumni gymnasium and Stoll field, and in itself small enough, is ordinarily the scene of much activity, but under the regime which began during the past school year promises to present a busier picture than ever."

"The truth of the matter is, it has become a discouraging kind of business even trying to keep a calendar on what is scheduled next year, but it is being considered. And there apparently is no good reason why such an event should not be held here each year."

"Latest thing to come along—although still in the talk stage—is a state high school championship baseball tournament to be held every spring on Stoll field."

"Nothing definite has been accomplished as yet in regard to the intercollegiate diamond tourney, but it is being considered. And there apparently is no good reason why such an event should not be held here each year."

"The University itself is reviving baseball next spring, after having permitted the sport to remain off its program for several years, and that means the game in Kentucky is to be given considerable impetus. Stoll field hereafter will have a better diamond engraved on its face, and Lexington, because of its central location, is of course an ideal place to hold any kind of a state contest."

Louisville Schools Have Nines In Kentucky, including the three high schools in Louisville, and undoubtedly when entries are called for the state tournament a big success.

"The activity of the WPA and the American Legion in serving as sponsors of amateur leagues has contributed to the renewal of interest in the great national game. Their work has been especially good for schools not having nines in present to organize for the sport when they do decide to take it up."

"When a state intercollegiate baseball tourney is added to the U. K. calendar, that will just about finish off the list. There probably isn't anything left that could be added."

Little Left To Add

In addition to the University's regular varsity football, basketball and baseball games, track meets and tennis matches, along with occasional freshman encounters, there must be added such fixtures as the state intercollegiate basketball tourney, the state track meet and the state championship tennis event, along with a few minor affairs. That list leaves little left that could be added.

"As soon as the baseball meet is installed and the annual South-eastern court tourney is invited to Lexington—and it'll come here just as soon as it receives a bid—we can back and rest while in the matter of bringing top-class sports events to our city."

Deaths in the Army

(New Orleans Times-Picayune) During the fiscal year ended June 30, 1937, we learn from the Surgeon General's summarized report, a total of 664 deaths was recorded in our regular army. Only one case of typhoid developed, and that was in the Philippines. That disease, formerly the pest and dread of armies, has been so thoroughly mastered by modern science and methods, that it is now a thing of the past. We are told, that "not a single case has been contracted by an American soldier on native soil in the past two years." Today, it is suggested, that disease but the automobile is the principal menace to army life.

Half of the 664 deaths noted above were caused by injuries—and 105 of the fatal injuries were caused by automobile accidents.

Men students at the University of Arizona are bigger babies than the women if figures released by the university infirmary can be believed without qualification. This year there were only 118 bed patients who were women but there were 250 men bed patients. Some of the peculiar ailments treated were wildcat scratches, horse bite, attempted suicide and cactus stickers.

RADIO CENTER

(Continued from Page One)

ly new, has already become nationally known. It is probable that in the near future other states with remote mountain districts within their borders will follow Kentucky's noteworthy example and establish listening centers of their own.

So important has this system become that "Look," one of the nation's leading picture-magazines, has announced its intentions of being present to make a photographic account of the opening of the newest listening post to be added to the 28 already in existence.

The director of the system is Elmer G. Sulzer, of the publicity bureau of the University. It is largely through his efforts that Kentucky's Listening Center system has progressed so rapidly and served its purpose so admirably. He, however, maintains that the State must not be satisfied with what it has accomplished in the past, but must in the future greatly expand the system in order to render the service of which it is capable.

Beta Gamma Sigma Initiates Two Men

Charles Baxter, Henderson, and Walter Rehm, Jr., Lexington were initiated into the Beta Gamma Sigma commerce fraternity during commencement week. An initiation will be held for Miss Gertrude Gaines, Stanford, and Richard Cooper, Somerset, sometime during August.

Initiation ceremonies were in charge of Dr. L. E. Carter, professor of economics at the University, and president of Alpha chapter of the National Fraternity, Prof. W. A. Tolman, secretary, and Dr. Edward West, dean of the commerce college.

NEW BUILDING NEARS COMPLETION

Biological Sciences Building Will Be One Of South's Best

By STANLEY KNIGHT

Two years of measuring, calculating, drawing, and estimating of inside arrangements by Dr. Morris Scherago and Dr. R. H. Weaver of the bacteriology department, together with the collaboration of the College of Engineering, have resulted in one of the finest and best equipped bacteriological units in the South.

This is the New Biological Sciences building now nearing completion across the street from and to the south of McVey and Kastle halls.

There were 20 sheets of brown paper that held the plans for the bacteriologist's dream. Twenty sheets that were the result of painstaking figures, sketches, and visualization of the completed structure.

Doctor Scherago, head of the department and Doctor Weaver even measured the heights of workbenches, the distance of faucet from sinks, and the exact position of chairs, cupboards, and equipment before they turned in their completed plans to the architect for final drafts.

With such features as a pure culture room where no bacteria are allowed to enter, huge refrigerators, and incubators, and with rooms arranged so that every square foot of space is utilized, the building will eliminate a dream for a complete scientific structure.

All laboratories are equipped with hot and cold running water, high and low steam for sterilizing, compressed air, suction gas, and electricity.

The bacteriology department will occupy the basement, first and second floors, and the physiology department will be located on the third floor.

"The building will be air-conditioned, with the windows non-opening, and the central heating plant will heat the entire three floors.

In the basement, an inoculation animal room, a feed room, and a room for the sterilization of cages are to be found.

First floor plans have provision for staff officers and private laboratories, a balance room where chemicals, food, and culture ingredients will be weighed, and dry and steam sterilization rooms.

Two research rooms for graduates doing individual work are located at the south end of the floor, with professors' offices located beside them. Huge plate glass windows separate offices from research laboratories so that students may be supervised at their work.

Included are a stock room for chemicals, the pure culture room, a photography room, incubators at various temperatures, a glassware sterilization room with a dumb waiter for the whole department, a kitchen for the preparation of culture media, a chemical reagent room, where bacterial stains and chemical reagents are contained, an autopsy and animal inoculation room for the examination of research animals, a tank for distilled water, and refrigerators.

Two enormous laboratories for undergraduates, located on the second floor, are each equipped with a series of incubation rooms, sterilization rooms, wash rooms, and media kitchens.

Advanced laboratories, one for the study of bacteriology, water, and sewage, and the other devoted to immunology, serology, laboratory diagnosis, and pathology may also be found on the second floor.

These laboratories are separated by balance rooms, incubation rooms, and refrigerators. In order to maintain a uniform temperature in a 35 degree incubator, it was placed in larger 20 degree apparatus. The bacteriologists even thought of that.

Devoted entirely to the physiology department, the third floor contains offices and laboratories for members of the faculty, and an advanced physiology lab complete with apparatus, animal rooms, a laboratory room, and a store stock room besides lounges and wash rooms.

The building is lighted by 58 large outside windows—thus insuring a sufficient supply of light for research and experimentation.

According to Ernest Win Johnson, architect, the structure is really only about one-third finished. Eventually it will contain another wing besides the one now built, and between the two will arise a central tower eight stories in height, which will probably be the highest structure on the campus. An auditorium will be placed behind the tower, in the center of the building.

The Biological Sciences building, part of the University's million dollar construction program which includes the Student Union building, the law building, and the Experiment Station addition, is expected to be occupied by February, 1939.

Take Any Job Available, Psychologist Tells Grads

The Kernel's Special Service

Chicago, Ill.—"Take any kind of a job and hold on to it, at least until times get better, rather than sit around and feel sorry for yourself."

That is the advice given to June college graduates by Dr. Robert N. McMurry, executive secretary of the Chicago branch of the Psychological Corporation and an expert in the study of job placement.

With more than eleven million out of work, college graduates can not afford to be "too choosy," according to Doctor McMurry.

His advice is, "Don't be high-hat because you have been graduated from college. Be realistic. Recognize that in the line you have trained for there may not be any openings. If you can't connect, don't feel badly about taking something on a lower level."

According to the Doctor, the chief danger in not taking an available job is the detrimental effect it will have on graduate's morale.

"Take for instance a man who has trained for an engineer's position and there is no opening for him," said Dr. McMurry. "He won't take a salesman's job because he feels that it is beneath him."

"After several months of fruitless looking for an engineer's job his morale goes to pieces, whereas if he recognizes the situation and accepts another kind of position he will be earning something, gaining experience and keeping his morale until this rather unusual employment condition is over."

Although "times are hard," he asserted, there are still jobs to be had "marginal positions which don't pay much money and in which there is not much future."

How High Up Are Planes?

America's epidemic of accidents caused by planes hitting mountains has gone on for two years without the one tangible result screamed for by these accidents—an instrument to tell the pilot how high he is above the ground.

The altimeter universally used on airlines is really an aneroid barometer, states Grover Leaning in the May Commentator. This instrument measures merely the decreasing atmospheric pressure that gradually becomes half of the sea level normal at about 18,000 feet—well up in the nose-bled, heart-thumping region. With corrections for weather conditions, we can know well enough our height above the sea, but not our actual height above the ground below us, unless, which isn't likely, we know how high that particular ground is above the ocean.

Your radio may get out of whack. The air beams and beacons and radio direction finding system may get balled up. You may have been set sideways on your course by a high wind—maybe near those mountains which are 12,000 feet high! Your altimeter will tell you how high above sea level you are; what really matters is how high you are above the ground. But it doesn't tell you that.

Music Note

(New York Post)

The latest issue of The Social Frontier, a monthly journal of educational criticism, brings us the news that Verdi's famous opera, "Aida," is heard to more in Italy.

Readers will recall that Aida, an Ethiopian slave girl in Egypt, is the daughter of Amnasso, King of Ethiopia. She and her father are captured by the Egyptians during their wars in Ethiopia. She falls in love with Rhadames, captain of the Egyptian guards, whereupon she and her father try to persuade Rhadames to become a traitor to Egypt and to help the Ethiopians recover their freedom.

"Substitute Fascist Italy for Egypt," The Social Frontier points out, "and the opera is up-to-the-minute politics. It opens with the words 'Everywhere is heard the voice of the Ethiopians breathing defiance.'"

With the completion of the new Women's swimming pool assured for September 1 another much needed improvement has been added to the University of Indiana.

Fayette Homemakers To Meet At Pavilion

Third Annual Get-Together Will Be Held June 28

The livestock pavilion of the University Experiment Station will be the scene of the third annual get-together of the Fayette County Homemakers' clubs to be held Tuesday, June 28. Mrs. H. C. Robinson, county recreational leader, said yesterday.

The 600 members of homemakers' clubs and their families will gather in the early afternoon, play games until supper time at 5:30, and after supper engage in dancing. Each club also will give a stunt, with a prize for the best one. Mrs. Robinson said plans have been made for the largest gathering of its kind ever held in Fayette county.

Johnny Vander Meer and Joe Louis probably are the most talked-about individuals in the world today. Hitler and Mussolini have stepped into the background.
