

RA6681-D--NO JERRY-BUILDING HERE.

Every house in Greenbelt is designed and built for long time use. Before plans were completed and construction begun, leading architects and engineers were called into consultation to insure the erection of buildings that would combine a maximum of beauty and serviceability at low cost. Houses are of 2 stories, well insulated throughout, varying in size from 2 rooms and bath, to six rooms and bath. A few apartments are also being built. The casement windows which can be seen in this picture are built at low cost and yet provide the greatest air and light and good looks. The same careful planning and foresight can be seen in the building of the whole town. The 1,000 houses now being built can be doubled in number as the town grows. Individual houses can be altered or enlarged as the family increases in size. Handy closets contain fixtures which can be converted to an extra bathroom with little cost. Electric, water, and telephone services are complete and up to date, while heating is provided by a central oil-heat plant for each group of houses. (Resettlement Administration Photo)
