

KISATCHIE National Forest

U. S. GOVERNMENT PRINTING OFFICE: 1937

The 190,000-acre Kisatchie National Forest weaves together a band of history and outdoor recreation in the heart of scenic Louisiana.

The terrain varies from beautiful cypress swamps with hanging Spanish moss to sandstone hills covered with longleaf pines. The Kisatchie is a natural botanical garden with more than 150 species of flowering plants and trees. Flowing streams in the winter and streams in April with degraded wild oysters, redfish, and various bass are the most common and conspicuous species. There are chances to see deer, squirrel, quail, and other wildlife in their natural habitat. The Kisatchie State area has long been a favorite area for bird watchers. About 250 species of birds are found on the Forest, including the endangered red-necked woodpecker and the bald eagle.

SALINE BAYOU - A section of this meandering stream, from Cloud Creek National Area to Forest Service Road 285, offers an interesting float trip through a scenic environment. Approximate float length is about 8 miles and takes a 1 1/2 hours.

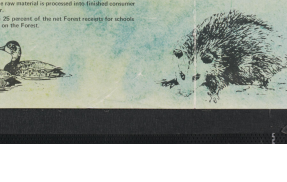

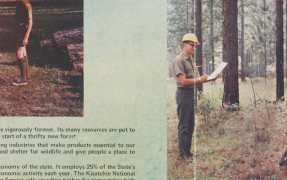

The saline stream winds through stands of large cypress, cypress, white, and black, many of which are elevated Spanish moss. Most of the area is wooded, some are the nesting and roosting and appropriate for cypress, white, black, and other birds. There are also some open areas, some have been recently cleared. There are also some open areas, some have been recently cleared. There are also some open areas, some have been recently cleared.

Primitive Campsites - Three primitive campsites on the Forest provide ideal settings for group camping. Scouts and other organized groups find these conditions particularly suitable for their needs. These areas provide only essential water and sanitation facilities. They are cleared of undergrowth for tent-type camping, and have an open area for sports activities.

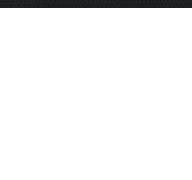

Camp Livingston Bicycle Trail - Bicycling is a form of outdoor recreation which is growing in popularity throughout the country. The Forest Service, in cooperation with the Central Louisiana Bicycle Club, has developed several miles of unimproved streets and roads for bicycle riding at Camp Livingston, a site used by the U. S. Army to train thousands of G. I.'s during World War II.

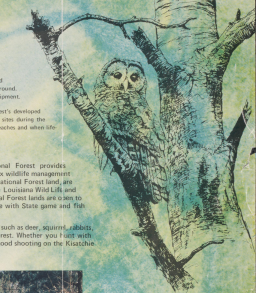

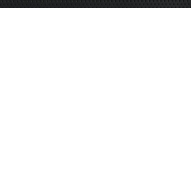

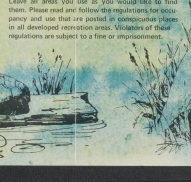

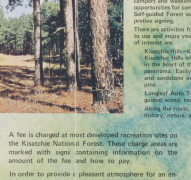

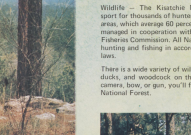

FAMILY FUN - The Kisatchie National Forest presents many opportunities for outdoor enjoyment. Whether it's a family camping trip or a picnic beneath towering trees, the Kisatchie offers a chance to get away from the routine of everyday living. There's something about the outdoors that makes every family want to spend a day in the forest.

Camping on the Kisatchie is designed for families and small groups who enjoy "glamping" in a forest environment. A family camping site is a developed campground which includes a parking area, tent and picnic table, and garbage receptacle. A water hydrant and sanitation facilities are within a reasonable distance of each site.

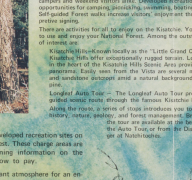

Camping at a developed recreation site is a first-class, first-class experience. You are limited to 14 consecutive days at any one campground. You must bring your own tent, sleeping gear, and cooking equipment.

The entire family can enjoy a relaxing vacation at one of the Forest's developed camping sites. For your safety, firearms are prohibited at these sites during the season. Firearms are prohibited in other than the developed locations and when the guards are not on duty.

Wildlife - The Kisatchie National Forest provides sport for thousands of hunters. Six wildlife management areas, which average 60 percent National Forest land, are managed in cooperation with the Louisiana Wildlife and Fisheries Commission. All National Forest lands are open to hunting and fishing in accordance with State game and fish laws.

There is a wide variety of wildlife such as deer, squirrel, rabbit, quail, and woodcock on the Forest. Whether you hunt with a gun, bow, or you'll find good shooting on the Kisatchie National Forest.

TIMBER - A managed forest such as your Kisatchie National Forest can be a significant factor in many resources are put to use, such as forest land, produce economic benefits and sets the stage for the care of a healthy new forest.

Each generation of trees furnishes the raw materials for a host of wood-using industries that make products essential to our everyday lives. The growing trees also protect watersheds, provide food and shelter for wildlife, and give people a place to enjoy the beauty of outdoor recreation.

Economic Benefits - Louisiana's forest industry is a major factor in the economy of the State. It employs 25% of the State's Forest Service workers and produces more than \$1 billion dollars in economic activity each year. The Kisatchie National Forest plays an important role in this State's supply of wood. The Forest Service sells, markets timber to commercial buyers, and sells large and small wood products to individuals who use the logging, fueling, and processing. The wood is used for lumber, pulp, and paper, plywood, and many other wood products. As a raw material in processed into finished consumer goods, it adds an estimated \$50 million to the local economy each year.

Parishes in which Kisatchie National Forest lands are located receive a 25 percent of the net Forest receipts for schools and roads. An additional 10 percent is used to construct needed road use the Forest.

GOOD HIGHWAYS AND FOREST ROADS provide easy access for the hunter and woodworker alike. Development of new roads and improvement of existing roads, bridges, and trails, and other facilities for the forest are a normal part of the Forest Service's program.

Longleaf Awns Trail - The Longleaf Awns Trail provides a beautiful scenic route through the forest. The trail is a 10-mile long, narrow-gauge railway, and is open to the public for the use of the State's Tourist from the Ocean State to the Gulf of Mexico.

Longleaf Awns Trail - The Longleaf Awns Trail provides a beautiful scenic route through the forest. The trail is a 10-mile long, narrow-gauge railway, and is open to the public for the use of the State's Tourist from the Ocean State to the Gulf of Mexico.

PREVENT FOREST FIRES!

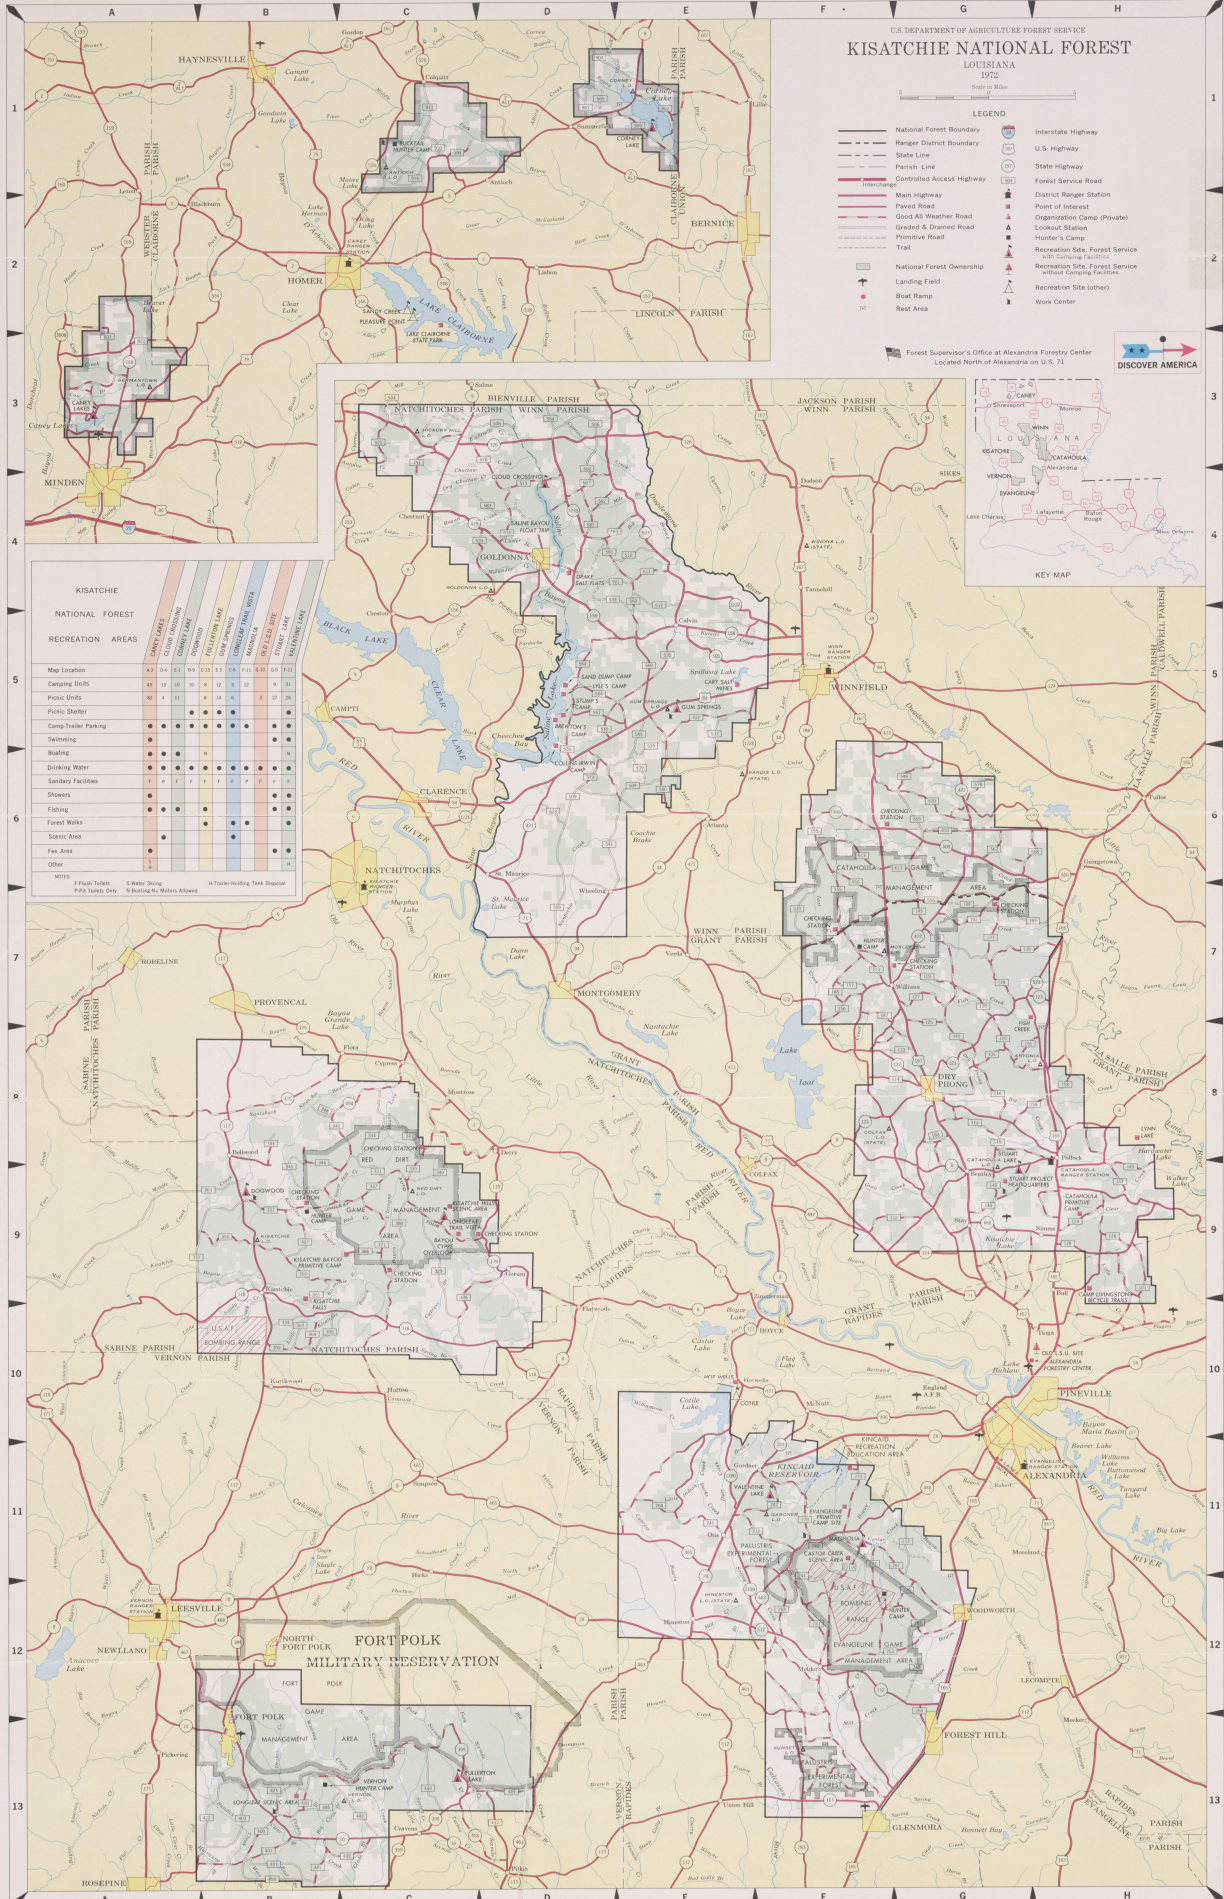

The Forest Service, U. S. Department of Agriculture, is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, and cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, the Forest Service is committed to providing increasingly greater services to a growing Nation.
