M. A. SCOVELL, Director.

A. M. PETER,      }  
H. E. CURTIS,      } Chemists.

H. GARMAN, Entomologist and Botanist.

C. W. MATHEWS, Horticulturist.

J. N. HARPER, Agriculturist.

EDWARD RHORER, Secretary to Director.

W. H. SCHERFFIUS,      }  
W. A. BEATTY,      } Assistant Chemists.

Address of the Station,

LEXINGTON, KENTUCKY.

**BULLETIN NO. 86.**

---

*Inspection and Analyses  
of Foods.*

---

Chapter 52, "An Act Regulating the Sale and Manufacture of Food," was passed by the General Assembly of the Commonwealth of Kentucky during the session of 1898. This act became operative June 13, 1898, and immediately thereafter this Station issued and sent to all grocers, confectioners, millers, and other dealers in food products in the State, who were rated "K" and above in Dun's Agency, the following circular of information regarding the above act, and enclosed also a copy of the act.

**AGRICULTURAL EXPERIMENT STATION OF THE STATE  
COLLEGE OF KENTUCKY.**

***Circular of Information Regarding the Kentucky Pure Food Law.***

The Legislature of Kentucky at its late session passed an act entitled "An Act Regulating the Manufacture and Sale of Food." The act went into effect June 13, 1898. Under this law, any person manufacturing, or selling, or exposing for sale any article of food, or any article which goes into the composition of food, as pure or unadulterated which is adulterated or misbranded, is subject to a fine not to exceed \$500, or not more than one year imprisonment.

The terms "adulterated" and "misbranded" are clearly defined in the law, a copy of which is sent herewith. So many inquiries, however, have been made in regard to labelling different articles of food so as to comply with the law that it has been thought best to present herewith a few provisional definitions of terms for the purpose of illustration.

**ANTISEPTICS.**

Salicylic acid, benzoic acid, boracic acid, or any of their compounds, or any other antiseptic or objectionable preservative must not be used in catsup, mince meat, canned meats or fish, canned vegetables, or any article of food, unless the presence of such antiseptic is plainly indicated on the label.

**BAKING POWDER.**

Baking powders are known as cream of tartar, phosphate, alum-phosphate, alum baking powders, etc., depending upon the acid substance used to liberate the carbonic acid in the soda bicarbonate contained in every baking powder. As some of these acid materials are considered more or less injurious to health, and as some are much cheaper than others, it is necessary, in order to comply with the law, to designate the kind of baking powder on the label, as cream of tartar baking powder, phosphate baking powder, phosphate-alum baking powder or alum baking powder.

**BUTTER.**

Butter should contain at least 80 per cent. of pure milk fats. Butter made by the use of "black pepsin" or other substance, in order to incorporate large quantities of water and casein is adulterated.

Where other fats or oils are substituted, in part or whole, for milk fats in butter, such article can not be sold as "Butter," or "Creamery," or "Dairy Butter," or any combination of words embracing the word "Butter," but must be classed as "Oleomargarine" or "Butterine" and so plainly labelled.

#### BUTTERINE OR OLEOMARGARINE.

Butterine or oleomargarine, or kindred compounds can only be manufactured and sold in this State when put up in "such package and manner as will advise the customer of its real character, free from coloration or ingredient that causes it to look like butter."

#### CHEESE.

Cheese not made wholly from milk or cream, salt, and harmless coloring matter, is considered adulterated, and must be sold as "Filled Cheese" or the name and amount of the adulterant must be made part of the label. Cheese made from milk from which part of the cream or fat has been taken, must be so labelled as to indicate the amount of cream or fat taken from the milk of which it was made. Cheese containing less than 10 per cent. of fat must be labelled "Skim milk cheese."

#### COFFEE.

Any article offered as coffee which contains any substitute for the coffee bean in any proportion is considered adulterated, and can not be offered for sale unless the quantity and kind of such substitute is given as part of the label.

#### CANDY.

The use of harmful coloring matters or other ingredients, and the admixture of terra alba, kaolin, or other mineral substances to give weight and volume to the mass, are adulterations. Where glucose is substituted in part or whole for cane sugar its presence must be indicated on the label.

#### CIDER.

Cider is the unfermented juice of the apple. Any substitute for apple juice, or any antiseptic added constitutes an adulteration and such adulterated cider can not be offered for sale, unless the name of the adulterant is made a part of the label.

**FLOUR.**

Flour is commercially known as the fine and bolted meal of the wheat grain, and for the purpose of this law is so defined. When mixed with the product of any grain except wheat it is adulterated and can not be offered for sale unless the kind and amount of the admixture is made part of the label.

Buckwheat flour or rye flour must be derived wholly from the grains designated in the name, and any admixture of other flours or materials constitutes an adulteration, and can not be offered for sale unless the kind and amount of such admixture is made part of the label.

**FRUIT JELLIES, FRUIT BUTTERS, PRESERVES, CANNED  
FRUITS, FRUIT CONSERVES, CONFECTIONS,  
FRUIT JUICES AND SYRUPS, ETC.**

Fruit jellies, fruit butters, preserves, canned fruits, fruit conserves, confections, fruit juices and syrups, etc., must consist of the fruit specified in the label, preserved only with cane sugar (sucrose), and must not contain artificial flavors, coloring matters or antiseptics. If such articles contain any substitute for the fruit, or any inferior material to make up bulk or weight, any glucose or other substitute for sugar, any artificial flavor or color, any starch or animal gelatine, any salicylic acid or other antiseptic, or any substance not naturally occurring in such fruits, except spices or other wholesome, natural flavoring materials, they are adulterated, and can not be offered for sale unless the presence of all such substances is clearly indicated by the label.

**HONEY.**

Honey is the nectar of flowers, and other saccharine exudations of plants, gathered by bees. Honey made by feeding bees glucose, sugar, invert sugar, or other saccharine substance, is not pure honey. Adding sugar, invert sugar or glucose to honey constitutes an adulteration, and such adulterated honeys can not be sold, unless the quantity and name of the adulterant is made part of the label.

**LARD.**

Lard is the fat of swine, the fat being melted and separated from the flesh. Adding beef fat or stearine, cotton seed oil, or other substitute for swine fat constitutes an adulteration, and such adulterated lard can not be sold unless the quantity and name of the adulterant is made part of the label.

### MILK.

Milk should contain at least 12 per cent. of total solids and 3 per cent. of fat. Milk containing less than these proportions will be considered adulterated, unless labelled or offered as "skim milk," or milk below standard. The addition of antiseptics or preservatives is an adulteration.

### MOLASSES AND SYRUPS.

All molasses and syrups are assumed to be made from the juice of cane, or other sugar producing plant, or the sap of the maple tree, and any syrup or molasses containing starch-sugar, glucose, or corn syrup is considered adulterated unless the label indicates the presence of the same.

### OLIVE OIL.

Olive oil is the expressed oil of the olive. The substitution of other oils or fats for olive oil, either in part or whole constitutes an adulteration, and such adulterated oil can not be offered for sale unless amount and kind of the adulterant is shown clearly on the label.

### SPICES, MUSTARD, PEPPER, ETC.

Spices, mustard, pepper, etc., must not contain any foreign substances or coloring matter introduced to dilute or cheapen the article, and any such admixture constitutes an adulteration and can not be sold unless its kind and amount are indicated on the label.

### TEA.

Tea consists of the dried leaves of the true tea plant, without addition of artificial coloring matter, or filler, or extraction of any essential properties, and any article offered as tea which does not conform to this definition is considered adulterated and can not be offered for sale, unless its true composition is given as part of the label.

### VINEGAR.

Standard vinegar is a vinegar made from the juice of the apple, containing not less than  $1\frac{1}{2}$  per cent. of apple solids and 4 per cent. acetic acid. All vinegars labelled "apple," "cider," or "orchard" vinegars are assumed under the law to be standard vinegars. Vinegars not made of the juice of the apple must be labelled truly of what

they are made, as "malt vinegar," "distilled vinegar," or "wine vinegar." Otherwise, they are to be considered adulterated. If artificial coloring matter is used, this must be stated on each and every label. Vinegars to which other acids than acetic acid have been added are adulterated.

Vinegars containing less than 4 per cent. absolute acetic acid may be sold, provided the percentage of acetic acid is made part of the label.

M. A. SCOVELL,

Director Kentucky Agricultural Experiment Station,

Lexington, Ky.

June 21, 1898.

**Number and Kind of Samples Collected and Analyzed,  
and Where Obtained.**

The work of collecting and analyzing samples was not begun until about two months later, in order to let all interested have time to comply with the provisions of the law. During the remainder of 1898 the Station collected and analyzed 239 samples, finding 123 samples to be adulterated under the provisions of the law, and in 116 samples no adulterations were found.

During the year 1899, 488 samples were collected and analyzed, 167 being found adulterated, and in 321 no adulterations were found.

Classing these samples, the Station has collected and analyzed from the time the law went into effect to December 31st, 1899, samples as follows:

**Kind and Number of Samples Collected from June 13, 1898  
to December 31, 1899.**

ARTICLE SAMPLED.	Not Found			Total
	Adulterated.	Adulterated	Total	
Baking powder .....	11	45	56

Dr. A. M. Peter and myself have had general oversight of the chemical analysis of these samples, assisted by W. H. Scherffius, W. A. Beatty and J. V. Reed. Dr. J. H. Kastle analyzed the baking powders and most of the lards and some of the catsups. Dr. Chase Palmer, of Louisville, analyzed most of the samples collected in

Louisville. Prof. H. Garman has had charge of the microscopical work. Mr. W. H. Scherffius collected most of the samples. Mr. T. G. Dunlap collected most of the samples in Louisville.

These samples were collected from the different places in the State as is shown in the following table:

**Number of Samples Obtained at Different Places In the State  
from June 13, 1898 to December 31, 1899.**

The Station has reported 97 adulterated samples of food to Hon. Frank Parsons, Prosecuting Attorney at Louisville, asking him to bring the same before the grand jury; 37 to Hon. John R. Allen, Prosecuting Attorney at Lexington; 7 to Hon. D. A. Glenn, Prosecuting Attorney at Covington; and 3 to Hon. J. P. Newman, Prosecuting Attorney at Newport.

As no provision is made in the law to pay the traveling expenses of witnesses, both before the grand juries and the courts, and as such fees were not allowed by the State, and, as the provisions of the law now are, it would be necessary for both the inspector, or the party who bought the samples, and the chemist who analyzed the samples to appear as witnesses, both before the grand jury and the trial court, and, as is often the case, the trial might be post-

poned from time to time, it has been deemed impossible to report to the grand juries some cases that would otherwise have been reported. Especially has this been true of samples taken at a distance from Lexington. In some instances the work of sampling and analyzing has been but recently done. These cases are now being reported to the prosecuting attorneys.

Following will be found the analyses of all samples of food collected, grouped in tables under appropriate headings:

## CANNED GOODS.

Six samples of canned goods were examined for antiseptics, including formaldehyde, salicylic acid, benzoic acid and boric acid, none being found in any of the samples. The samples examined are described as follows:

5631—"Victory Fancy Grated Pineapple," packed by the John Boyle Co., Baltimore, Md. Bought of Bluegrass Grocery Co., Lexington, Ky., June 29, 1899.

5632—"Winter's Luxury Corn," H. F. Webb Co. Portland, Me. Bought same as 5631.

5633—"National Brand, Standard Quality, Lemon Cling Peaches," Lincoln Fruit Packing Co., Lincoln, Cal. Bought same as 5631.

5634—"Royal Brand Sugar Corn," Rumford Canning Co., Rumford, Me. Bought same as 5631.

5635—"Concentrated Clear Consomme," Armour Packing Co. Bought same as 5631.

5640—"Hitz Brand, White Pie Peaches," Madison Packing Co., Madison, Ind. Bought of Bacher Bros., Lexington, Ky., June 30, 1899.

## FLOUR.

Twenty samples of wheat flour were examined by means of the microscope for adulteration with corn starch or "flourine," and for alum by the logwood test. No sample was found to be adulterated, though in two or three there was a very small amount of corn starch probably accidental. The samples examined are described as follows:

5021—Sample of the flour in daily use in the Kentucky Penitentiary, sent by the Warden, Mr. E. T. Lillard, Frankfort, Dec. 19, 1898. Moisture, 7.61 per cent.; ash, 0.63 per cent.; protein, 11.44 per cent.

5167—Same, sent Jan. 18, 1899. Moisture, 8.12 per cent. ash, 0.78 per cent.; protein, 11.56 per cent.

4585—Silver Star, Guthrie Mill Co., Guthrie, Ky. Bought of T. T. Russell, Guthrie, Ky., Sept. 5, 1898.

4595—"Acme," Acme Mills Co., Hopkinsville. Bought of A. M. Wallis, Hopkinsville, Sept. 3d, 1898.

4596—"Orient," Crescent Milling Co., Hopkinsville. Bought same as 4595.

4623—"Eagle," Acme Mills Co., Hopkinsville, Ky. Sent by Wm. Grau, Hopkinsville, Ky., Aug. 8, 1898.

5548—Sample obtained from Luther McMillan, Lexington, May 25, 1899, out of a lot bought by him in Crittenden, Ky. Moisture, 12.38 per cent.; protein, 9.72 per cent.; ash, 0.75 per cent.; silica, .006 per cent.; alumina, .001 per cent.

- 4597—"Obelisk," Ballard & Ballard Co. Louisville, Ky. Bought of Jacob Gast, Louisville, Ky., Sept. 6, 1898.
- 4598—Same. Bought of H. K. Greeley, Louisville, Sept. 7, 1898.
- 4599—"Golden Rule," Meloy & Robinson, Scottsburg, Ind. Bought same as 4598.
- 4600—"Gold Dust," R. O. Gathright & Co., Louisville, Ky. Bought same as 4598.
- 4601—"Acme," Eberts Bros., Jeffersonville, Ind. Bought same as 4598.
- 4602—"White Dove," same make. Bought same as 4598. A small amount of corn starch was noted in this sample, probably not more than one-half of one per cent.
- 4603—"Gold Medal," Washburn & Crosby, Minneapolis, Minn. Bought same as 4598.
- 4604—"Standard Roller Mill O. K.," E. B. McCormick, Charlestown, Ind. Bought same as 4598.
- 4605—"Old Gold," Evans & Henthorn, Otisco, Ind. Bought same as 4598.
- 4606—"Sea Foam," E. B. McCormick, Charlestown, Ind. Bought same as 4598.
- 4593—"Triumph, Extra Fancy," Wilford Stinston & Co., Mayfield, Ky. Bought of J. B. Wrather & Son, Mayfield, Aug. 24, 1898.
- 4594—"Jersey Cream," Wilford Stinston & Co., Mayfield, Ky. Bought of T. B. McNeely, Mayfield, Aug. 24, 1898.
- 4624—Sample sent by Walcott Bros., South Carrollton, Ky., Aug 14, 1898.

## PEPPER, SPICES, COFFEE, ETC.

Seventeen samples of these articles were examined by means of the microscope, twelve of them being found adulterated by admixture with foreign material.

## Adulterated.

- 4675—Ground Cayenne, Newton & Frank, Cincinnati, O. Bought of E. W. James, Louisville, September, 1898; contains corn starch.
- 4677—Ground Mace, same, bought same; contains starch.
- 4678—Ground Cloves, same, bought same; contains starch.
- 4679—Ground Allspice, same, bought same; contains foreign starch.
- 4680—Ground White Pepper, same, bought same; contains foreign starch.
- 4681—Ground Black Pepper, same, bought same; contains Demerara pepper and much foreign starch.
- 4682—Ground Mustard, same, bought same; contains starch.
- 4683—Ground Cinnamon, same, bought same; contains starch.
- 4561—"Pure Ground Pepper," Nash Smith Tea & Coffee Co., St. Louis, Mo. Bought of C. A. Payne, Mayfield, Aug. 24, 1898; contains foreign starch.
- 4676—Ground Ginger, Weeks Bros., Paducah, Ky. Bought of Tilghen Shipley, Murray, Ky., Aug. 26, 1898; contains wheat starch.
- 4566—"Primrose Strictly Pure Pepper," R. G. Terrell, Paducah. Bought of J. L. Brown, Paducah; contains foreign starch.
- 4667—Ground Coffee, "Evans' Star Best." Bought of M. F. Simmons, Russellville; contains chicory and cereal starch.

## Not Found Adulterated.

- 5003—"Madja" coffee, roasted, James Heekin & Co., Cincinnati, O. Bought of J. B. Rogers & Co., Lexington, Ky.
- 4558—"Morning Joy," ground coffee, New Orleans Coffee Co., New Orleans and Atlanta. Bought of R. D. Robertson & Co., Mayfield, Aug. 24, 1898.
- 4565—Ground Black Pepper, E. R. Durkee & Co., New York, Gauntlet brand. Bought of Jo. T. Bishop, Paducah, Aug. 22, 1898.
- 4666—Ground Pepper, Thompson & Taylor Spice Co., Chicago, Ill. Bought of Robertson Bros., Murray, Ky., Aug. 26, 1898.
- 4674—"Strictly Pure Cayenne Pepper," Weeks Bros. & Co., Paducah, Ky. Bought of Tilghen Shipley, Murray, Aug. 26, 1898.

## CORN STARCH—NOT FOUND ADULTERATED.

One sample was examined, no adulteration being found.

5098—"Oxford High Grade Corn Starch." Bought of Ryan Furgeson, Murray, Ky. Moisture, 12.13 per cent.; protein, 0.37 per cent.; ash, 0.12 per cent.; starch, by difference, 87.38 per cent.

#### COOKING SODA—NOT FOUND ADULTERATED.

Three samples were analyzed, none being found to contain anything unwholesome or that would cause the article to be pronounced adulterated. There was some difference in quality, however, the "Arm and Hammer" brand being the purest and DeLand's "Cap Sheaf" being the lowest grade.

5096—"Cow Brand Soda," John Dwight & Co., New York. Bought of R. D. Robertson & Co., Mayfield, Ky.; bicarbonate of soda, 98.7 per cent.; chloride of sodium, 0.3 per cent.; carbonate and sulphate of soda, moisture, etc., 1.0 per cent.

5097—"Cap Sheaf Soda," DeLand & Co., Fairport, N. Y. Bought of Ryan & Furgeson, Murray, Ky.; bicarbonate of soda, 95.1 per cent.; chloride of sodium, 0.5 per cent.; carbonate and sulphate of soda, moisture, etc., 4.1 per cent.

4595—"Arm and Hammer Soda," Church & Co., New York. Bought of J. E. Potter, Paducah, Ky.; bicarbonate of soda, 99.2 per cent.; carbonate of soda, traces of insoluble matter and moisture, 0.8 per cent.

#### SWEET CIDER AND GRAPE JUICE—ADULTERATED.

Three samples were examined for antiseptics, all of them being found to contain salicylic acid.

4607—"Welch's Grape Juice," The Welch Grape Juice Co., Westfield, N. Y. Bought of T. P. Taylor & Co., Louisville, Sept. 9, 1898; contains salicylic acid.

4706—"Pure Cherry Wine Cider," M. Livingston & Co., Paducah, Ky. Bought of M. L. Wilson, Lynnville, Aug. 29, 1898; contains salicylic acid.

4707—"Blackberry Cider," Price & Lucas Cider & Vinegar Co., Louisville. Sample obtained in Lexington for comparison; contains salicylic acid.

4573—"Sparkling Sweet Cider," Hirsch Bros. & Co., Louisville, Ky. Bought of G. N. Leisner, Paducah, Ky., Aug. 22, 1898; contains salicylic acid. (Messrs. Hirsch Bros. state that they have this bottled for them in New York State, and did not know it contained antiseptic. They will hereafter have it to comply with the law.)

#### MILK COLOR.

5462—"The Ideal Milk and Cream Color," "made from the best annatto," The Creamery Package Manufacturing Co., Chicago. Bought of J. H. Parker, Lexington, Ky. Chemical tests agree with those of annatto.

## BAKING POWDERS.

It will be seen from these tables that 56 baking powders were analyzed, 45 of which were found to be alum—or alum-phosphate powders, and eleven cream of tartar powders.

Baking powders are a mixture of sodium bicarbonate and some form of acid salt, together with from one-fifth to one-half of their weight of starch or flour.

Baking powders may be classed under four kinds, depending upon the acid salt used, viz.: First, cream of tartar baking powders; second, alum baking powders; third, alum-phosphate baking powders; and fourth, phosphate baking powders.

So far as their efficiency in bread-making is concerned, they are about of equal value; that is to say they all liberate about the same amount of carbonic acid gas when fresh. It is the liberation of this carbonic acid gas in the dough in the process of baking that causes the bread to rise and to be porous.

When baking powders are used in bread-making, a chemical change takes place, caused by the water used in mixing the dough and the heat in baking the bread resulting in the evolution of carbonic acid gas, and a fixed residue remains in the bread. This fixed residue in the case of cream of tartar baking powder is potassium sodium trtarate, usually called "Rochelle Salts." In the case of alum baking powders or alum-phosphate baking powders, this residue, if the reaction is complete, is sodium sulphate and alumina hydrate or phosphate. In the case of phosphate baking powders, the residue is calcium and sodium phosphates.

In the case of alum baking powders, or alum-phosphate baking powders, there seems to be a difference of opinion as to whether they are injurious to health or not. It often happens that the reaction is not complete in the process of bread-making. In all such cases alum is left in the bread. This is known to be an astringent and irritant to the mucous membranes. Even when the reaction in bread-making is complete, the alumina hydrate is undoubtedly soluble to some extent in the juices of the stomach and albuminous substances, thus irritating weak stomachs, and is undoubtedly injurious in such cases.

I do not believe that by the use of alum baking powders injury to health has been sufficiently proven to prohibit the sale or manufacture of such baking powders. I am strongly of the opinion, however, that baking powders should be named and plainly labeled according to the acid salt which they contain; and I believe a pure food law should compel all manufacturers of cream of tartar baking powders to label their goods "Cream of Tartar Baking Powder"—not "Pure Baking Powder," or "Baking Powder;" all manufacturers

of alum baking powders should be compelled to label their goods "Alum Baking Powder;" all manufacturers of alum-phosphate baking powders should be compelled to label their goods "Alum-Phosphate Baking Powder;" and all manufacturers of phosphate baking powders, "Phosphate Baking Powder." Such labeling would inform the purchaser of the kind of baking powder he was buying.

As one of the objects of the present law is to inform the purchaser or consumer of what he is buying or consuming, I have ruled that baking powders should be labeled as above. All of the samples described in the table of adulterated baking powder were without any mark to show their true character. One of them bore on the label the legend "This powder contains C. T. S., Bic. Soda, E. A. & S. T." which leaves the reader uninformed as to whether the contents of the can was alum baking powder or not.

I think it would be better if this ruling could be incorporated as a part of the law.

#### BUTTER.

Of 147 samples of butter analyzed, 29 were found to be adulterated with oleomargarine, or kindred compounds. These 29 adulterated samples covered only those which were purchased as butter. A number of samples were purchased as butter, and when closely examined were found to be marked "oleomargarine." If the rulings of this station in regard to butter are within the scope of the law, or, if otherwise, the law could be made so as to contain these rulings, I am of the opinion that oleomargarine would have to be sold on its merits. Now it is put up mostly in pound packages and colored the same as butter and marked "Holstein," "Elgin," etc., to deceive the purchaser; grocers often advertise it and bill it as creamery butter, and when butter is called for, sell it as butter, putting it in a package, most generally in a paper sack, the bottom of which has previously been stamped "oleomargarine," in order to comply with the Federal law. Oleomargarine should not be advertised as butter. The law prohibits its sale as butter, and when consumers call for butter substitutes should not be offered them as butter. Oleomargarine, or any substitute for butter, when put up in pound packages, should be stamped plainly "oleomargarine" on the package before being wrapped, and the tissue paper which is wrapped around it should be stamped in bold letters "oleomargarine," and no other markings whatever, such as "Elgin," or "Holstein," etc., should be allowed on packages of oleomargarine or other butter substitute.

#### FLOUR.

A number of samples of flour were analyzed with the expectation

that corn starch might be found as an adulterant, but since the Government requires the stamping of all such flour, we have found no such adulterant.

#### JELLIES, PRESERVES, ETC.,

With the limited number of examinations of jellies, preserves, etc., which we have made, it becomes at once apparent that most of such are adulterated. Currant jellies in reality are apple jellies, colored like currant jellies, and phosphoric acid and glucose, etc., are put in as adulterants. Preserves contain in most instances salicylic acid, or other antiseptic, which should not be used except such statement is printed on the label. In cheap jellies glue or starch paste are often used; in fact, pure jellies and preserves are rare. In the height of fruit seasons the manufacturers of preserves, jellies, etc., buy up large quantities of fruit, and often times, no doubt, when it is unfit for consumption, because it has commenced decaying, and in order to preserve it from further decomposition, add salicylic acid, or other antiseptic, heat it, store it in large cans, and when the busy season is over this stock is worked up at leisure into preserves, jellies, etc., etc.

#### TOMATO CATSUPS.

Tomato catsups almost invariably contain salicylic acid, or other antiseptic. It is claimed by some of the manufacturers that this is essential to the preservation of them, but it is a well-known fact that if properly prepared at first, they can be put up without danger of fermentation; and I believe the law should be enforced requiring that all manufacturers of preserves, jellies, catsups, etc., should note plainly on the label if any antiseptic is used.

#### LARD.

Only a few samples of lard (40), were analyzed. Eleven were adulterated, mostly with cotton seed oil.

#### MILK.

One hundred and fifty samples of milk were examined. Thirty-five of these were found to be adulterated. Twenty-two contained preservatives; eight were artificially colored to make them look richer; and nine contained skim milk, or were watered. It is clearly a violation of the law to add preservatives to milk for the purpose of keeping it from souring, as such preservatives, at least, retard digestion when the milk is taken into the stomach, if they do not have a direct injurious effect on the system. When we re-

member that such milk is often sold to be fed to small children and infants, their use becomes criminal.

In several instances, milk was found to contain artificial coloring matter to make it look like rich milk or cream. In one instance this milk contained only 1.85 per cent. of fat, showing it to have been mixed with skim milk. This is clearly a deception, and a deception that will be practiced by the unscrupulous unless the law is strictly enforced.

Milk is a great absorber of impurities of all kinds. Germs of the various diseases grow and multiply in it at an enormous rate. It is the richest food for all bacteria. It becomes important, therefore, that dairy cattle should be kept in quarters free from filth and disease, and that they should be fed only wholesome food. Milk from cows quartered in close, unventilated barns, unkept and filthy, and which are fed on distillery slops, should be condemned as unfit for human consumption.

#### SPICES.

From our brief work on spices, we find them almost invariably adulterated, showing conclusively the necessity of the law.

#### VINEGAR.

Of the 126 samples of vinegar analyzed, we found fifty-nine adulterated. Most of these adulterated vinegars are vinegars made from low wines, called distilled vinegars, and colored with burnt sugar and labeled "Apple" or "Cider" vinegars. They are sold at wholesale anywhere at from 8 to 18 cents and retailed at from 20 to 40 cents per gallon. It costs the manufacturer very little to make these vinegars, and it is a deception and a fraud to sell them as cider or apple vinegars.

I believe the rulings in regard to vinegars should be incorporated as a part of the law.

#### CONCLUSION.

From the results obtained under the operation of the pure food law in so short a time, the necessity of the law is clearly shown. Fully 40 per cent. of all samples of food taken have been found adulterated. Some of the adulterants used are injurious to health; others have been put in to cheapen articles of food. From the investigations of the United States Senate Committee on Pure Foods, it is shown that nearly 90 per cent. of all food products are being adulterated in this country. Says Mr. H. B. Mason, in summing up the work before the Senatorial Committee:

"Dr. Wiley, who has been chief chemist of the Agricultural Department at Washington for many years, asserted that nearly every kind of food upon the market is, to a greater or lesser extent, adul-

tered, misbranded, or otherwise rendered harmful or fraudulent. More Vermont maple sugar is made every year in Davenport, Iowa, from cheap yellow sugar, flavored with vegetable extracts, than can be produced from all the maple trees in the whole State of Vermont! Currant jelly is manufactured from the cores and parings of apples utilized after they have been evaporated; glucose, sugar, a vegetable acid, and some coloring and flavoring matter complete the delicacy! Nearly all of the 'pure olive oil' imported to this country is cotton-seed oil made in the Southern States, sent abroad and there refined and returned to us as the pure product of the Mediterranean olive!

"Dr. Wiley, Professor Mitchell, of the Wisconsin Dairy and Food Commission, and others told how the public purse is defrauded and the public health damaged by butter from which the milk fats have been taken and vegetable and animal fats added; how coffee has often been found to consist mainly of molasses and flour molded into berries; how fully 70 per cent. of beer is made without malt; how the color of tea leaves, pickles, and of certain vegetables and canned goods is made with copper salts and the like; how condensed milk is made from milk which has been skimmed and effectually ridded of nearly all of its nutritious material; how spices are not spices; how sardines are not sardines; how fifteen-year-old whisky can be made in fifteen minutes; and how communion wine is usually nothing but a weak solution of salicylic acid flavored with unfermented grape juice.\* \* \* Antiseptics and preservatives of various kinds are used indiscriminately to defraud and to deceive, and that these are nearly always harmful and sometimes positively dangerous.' Butchers use preserving fluids on choice scraps of meat which they lay aside for transformation into the delicacy known as 'Hamburger steak.' Milk and butter are preserved with 'freezine,' which is nothing more than a solution of formaldehyde. Fruits and fruit products are preserved with salicylic acid; bacon, sausage, and other animal products with boracic acid.

"It was disclosed also that this country had long been a 'dumping-ground, for all sorts of adulterated and inferior food products sent here from abroad.'

"This neglect of the public health has enabled manufacturers of foods and drinks to go to almost unlimited lengths in the adulterations and cheapening of their products, regardless alike of the public purse and the public health. Their greed has had no check; their dishonesty has received no punishment. They have flourished and grown fat at the expense of the people who have consumed their inferior, counterfeited, and harmful products. This is no indifferent matter; it is further reaching in its effects than a cursory thought indicates. Reflection must convince any thoughtful man that the prevalent consumption of inferior and harmful foods by a people

must result in the physical and moral deterioration of that people."

In endeavoring to carry into effect the law, we have found as striking examples in our own State. Kentucky has been the "dumping-ground" for inferior food products that could not be sold in other States. I am told by a manufacturer of preserves that a carload of certain preserves were condemned as unfit for use in Ohio. Instructions were given to ship to Indianapolis, and add salicylic acid, boil and ship to Kentucky.

A grocer bought a carload of jelly at a very low price in tubs. After keeping a short time, it separated into glue and liquid and was worthless. One of the preserving companies in Louisville told me that runners were offering a cheap grade of glue for jellies, and certain preservatives, which they guaranteed chemists could not detect.

We have found salicylic acid, sometimes in large quantities, in tomato catsups, preserves, and other food products which were sold as pure. We have found formaldehyde and other preservatives in milk, which perhaps in some cases was fed to infants. The most striking example of all is in the case of essence of peppermint and essence of cinnamon sent to us from the county attorney of Pike county. These extracts both contained "wood alcohol," a poisonous substance, as one of the ingredients, and the county attorney stated that death had been caused by their use. In the preparation of these essences a mixture of wood alcohol and common alcohol was used in place of common alcohol, presumably to avoid the Government tax on alcohol.

19721
