

LOSE ONE AND YOU ARE ALWAYS SUSPECTED
OF HAVING BEEN CARELESS!

GOOD HOUSEKEEPING

Gob well back from face and piled neatly on the gob side. Tools that are not in use laid against the rib. No loose brows left hanging back on the ribs. Places cleaned up well for the machine men to cut, with no loose coal left in the way of the machine, and no loose coal and slate left hanging on face to fall and be ground into the "bug dust". Posts set on line with proper clearance for machinemen to handle their machine and for the couplers and miners to handle their cars. Track torn up after a clean-up and placed out of the way of the machine.

HOW DOES YOUR PLACE LOOK? A MINER IS JUDGED BY HIS WORKING PLACE AND A SECTION FOREMAN BY THE SECTION HE KEEPS.

R E M E M B E R An eye injury, no matter how slight, if neglected may cause you to lose some, if not all, of the sight in that eye. Do not become an industrial outcast through your own neglect.

It isn't the number of posts you set,
Or the goggles or shoes you wear;
It isn't the slate that you took down
Or the way you blocked your car,
It's true that these all help a lot,
But when all's been done and said --
The thing that prevents the accidents
Is the way you use your head!

IS THE WAY YOU USE YOUR HEAD!!

OUR NATION

It is the worker in the mine or in the field. It is his family; his wife preparing the meal, his children at play.

A nation is a productive machine of farms, factories, mills, mines, highways and airways. It is Freedom and security.

To this Freedom and Security, Safety is vital. It protects the people and the things that make up our country.

But Safety, too, extends beyond the mere physical plane. A worker saved from death or injury not only is protected personally, but his family is spared sorrow and suffering; their comforts protected by his earning power.

All of this is true regardless of whether the accident might have occurred in the mine, on the highway, or at home.

Universal Safety goes a long way toward protecting our Freedom and Security.
